

DESCRIPTION

BIO GUARD is the safe and natural solution for odor control. To effectively eliminate urine, you must break down all three main components: urea, urochrome and uric acid. Uric acid contains non-soluble salt crystals and is the most difficult component to remove. Both urea and urochrome can be easily removed with normal cleaning and general urine odor products, but Uric acid does not dissolve in water causing it to remain on the surface. After initial cleaning and drying with ordinary products, it may appear that the problem is solved. However, any moisture will reactivate those remaining crystals and the smell returns as strong as it originally was.

BIO GUARD contains specially formulated enzymes and microorganisms (bacteria) that actually "eat" the uric acid crystals, in addition to removing the other components of urine. By removing the source of the odor and the stain, the problem is solved! Effectively removing these crystals is what distinguishes **BIO GUARD** from the rest of the products.

DIRECTIONS FOR USE

RESTROOM SURFACES: Clean all restroom surfaces first. After cleaning spray **BIO GUARD** onto any surface that urine may have contacted until sufficiently wet. Spray any other surface suspected of causing odors. Do not rinse. Let air dry. **BIO GUARD** will leave no residue.

DRAIN ODOR: **BIO GUARD** is highly effective at killing odors from floor drains, sinks, showers and tubs. Pour **4 ounces** of **BIO GUARD** into each drain twice per week.

CARPETS AND RUGS: Remove as much of the solid waste as possible. Apply to spot, fully saturating. Because spots expand make sure to cover the entire area thoroughly. Gently work solution into spot. Place a towel moistened with solution over the area and keep damp as long as possible, preferably 24 hours. Repeat treatment if necessary.

LAUNDRY PRE-SPOTTER: To help remove organic stains from fabric spray soiled areas prior to washing.

URINAL DRIP SYSTEM: Use as an economical refill to control odors in urinals.

A/C SYSTEMS: Add **BIO GUARD** directly to condensate drip pans and drain lines to flush away organic contaminants. **BIO GUARD** is harmless to pans and drains.
