

## DESCRIPTION

**HALO** is a special blend of high foaming detergent agents and special acidic compounds which will effectively and dramatically improve the exterior appearance of passenger vehicles when used according to label directions. It was formulated for use as a replacement to "show foam" products that are commonly used in professional car wash tunnel operations. Most "show foam" products are used exclusively for customer appeal and service value reinforcement. **HALO** provides the additional benefit of removing all acid soluble soils resulting in a dramatically cleaner surface, increased vehicle shine and brighter chrome and glass surfaces. These soils are typically not removed by standard alkaline formulations.

**HALO** will effectively remove paint oxides, metal oxides, chrome oxides, industrial fallout, water spots, mineral stains, and other acid soluble soils. **HALO** will not adversely affect painted surfaces when used according to label directions.

**HALO** is formulated to provide additional cleaning benefits in normal tunnel configurations. It should be used in sequence after the proper application of a one-step alkaline presoak detergent. Contact your Wechem Sales Consultant for use suggestions and compatible products for use with **HALO**.

## DIRECTIONS

**HALO** must be diluted with water prior to use. Actual working dilutions will vary according to soil conditions and operation considerations. Operator should adjust dilution rate until desired foam level and optimal cleaning results are achieved. Normal dilutions will vary from 1 part **HALO** to 50 parts water, up to 1 part **HALO** to 125 parts water. Recommended dilution starting point is 1 part **HALO** to 75 parts water.

**NOTE:** **HALO** must be diluted a minimum of 1 part **HALO** to 35 parts water. Do not allow to dry on vehicle surface.
